INTERVALOS (CONJUNTOS)

$$]a, b[= \{x \in \mathbb{R} / a < x < b\} \text{ PARA } a < b$$

↳ INTERVALO ABERTO

$$]a, b] = \{x \in \mathbb{R} / a < x \leq b\} \quad [c, d[= \{x \in \mathbb{R} / c \leq x < d\}$$

↳ INTERVALO SEMIABERTO

$$[a, \infty[= \{x \in \mathbb{R} / a \leq x\} \quad]-\infty, b] = \{x \in \mathbb{R} / x \leq b\}$$

↳ INTERVALO INFINITO

CONJUNTOS LIMITADOS SUPERIORMENTE

$X \subset \mathbb{R}$ É LIMITANTE SUPERIOR SE EXISTE $b \in \mathbb{R} / x < b \quad \forall x \in X$

Ex: $X = \{x \in \mathbb{Q}_+ / x^2 < 2\}$

2 É UM LIMITANTE SUPERIOR DE X, MAS O MENOR LIMITANTE DE X É $\sqrt{2}$, TODO NÚMERO $> \sqrt{2}$ É LIM. SUP. DE X

APROXIMAÇÃO DE $N \in \mathbb{R}$ POR $N's \in \mathbb{R}$

APROXIMAÇÃO DE $\sqrt{2}$

$$d = \sqrt{2} \rightarrow 1 < 2 < 2^2 \rightarrow 1 < d^2 < 4 \rightarrow 1 < d < 2 \quad \textcircled{I}$$

$$d = 1 + \underbrace{\varepsilon}_{\text{ERRO}} \rightarrow d \approx 1, \text{ ERRO, } 0 < \varepsilon < 1$$

$$d \notin \mathbb{Q}$$

INTERVALOS: $(1; 1.1)(1.1; 1.2) \dots (1.9; 2)$

II

$$(1.4)^2 = 1.96, (1.5)^2 = 2.25$$

$$\hookrightarrow 1.4 < d < 1.5$$

$$d = 1.4 + \varepsilon \rightarrow d \approx 1.4 \text{ \& } \varepsilon < 0.1$$

INTERVALOS DE $\frac{1}{100}$ DE $(1.4; 1.41)$ À $(1.49; 1.5)$

III

$$(1.41)^2 = 1.9881 / (1.42)^2 = 2.0164$$

$$1.41 < d < 1.42 \rightarrow d = 1.41 + \varepsilon, \varepsilon < 0.01$$

$$\left. \begin{array}{l} a_0 < b_0 \rightarrow 1 \in \mathbb{Z} \\ a_1 < b_1 \rightarrow 1.4 \in [1, 1.5] \\ a_2 < b_2 \rightarrow 1.41 \in [1.41, 1.42] \end{array} \right\} \text{APROXIMAÇÃO}$$

$$d = \sqrt{2} \approx a_n$$

$$\text{ERRO } \varepsilon < \frac{1}{10^n}$$

$$\underline{\underline{\text{ERRO } \varepsilon = \text{dist}(d, a_n)}}$$
